

EDUCATION

- 2014 - 2018
Field of study
Súkromná stredná odborná škola, Poprad
Information and digital technologies
- 2018 - takes
Field of study
Technical University of Košice
Faculty of electrical engineering and informatics
Informatics
- 2023
Graduate of the master's degree in the study programme Informatics

EXPERIENCE

- 2021-2022
Work position
Alto Slovakia s.r.o.
Python programmer / IT technician
- 2022 - takes
Work position
Inlogix Software s.r.o.
JavaScript (HTML5)

In addition to my work experience, I've done several projects for school (console applications, websites). For example, a mobile application for storing 3D models and displaying them in augmented reality made in software Android Studio. Worth mentioning is also my master thesis which dealt with a system for water leak detection ultrasonic measurement with transmission of measured values in real time. The potential leak was evaluated using machine learning. In solving the problem I used technologies and tools such as docker, Node.js, ReactJS, Grafana, MQTT and others. Also several of my own projects. Feel free to check my github where you can find out my code.
